AWS Services in Scope by Compliance Program

We include generally available services in the scope of our compliance efforts based on the expected use case, feedback and demand. If a service is not currently listed as in scope of the most recent assessment, it does not mean that you cannot use the service. It is part of the [shared responsibility](#) for your organization to determine the nature of the data. Based on the nature of what you are building on AWS, you should determine if the service will process or store customer data and how it will or will not impact the compliance of your customer data environment.

We encourage you to discuss your workload objectives and goals with your AWS account team; they will be able to evaluate your proposed use case and architecture, and how our security and compliance processes overlay that architecture. [Need to connect with an AWS business representative?](#)

This webpage provides a list of AWS Services in Scope of AWS assurance programs. Unless specifically excluded, generally available features of each of the services are considered in scope of the assurance programs, and are reviewed and tested at the next opportunity for assessment. Refer to the [AWS Documentation](#) for the features of an AWS service.

✓ = This service is currently in scope and is reflected in current reports. For more specific details on status, please refer to each compliance program tab below.
