ISO/IEC 27001

The International Organization for Standardization (ISO) is an independent, non-governmental international organization with an international membership of 163 national standards bodies. The ISO/IEC [27000 family of standards](#) helps organizations keep their information assets secure.

[ISO/IEC 27001:2022](#) outlines and provides the requirements for an information security management system (ISMS), specifies a set of best practices, and details the security controls that can help manage information risks.

The Google Cloud Services ISMS has received an accredited ISO/IEC 27001 certification after undergoing an audit by an independent third party.

The 27001 standard does not mandate specific information security controls, but the framework and checklist of controls it lays out allow Google to ensure a comprehensive and continually improving model for security management.

Google Cloud, Google Workspace, and Apigee ISO/IEC 27001 certificates may be requested using the [Compliance Reports Manager](#). Potential customers can reach out to [sales](#) for more information.

FAQs

Collapse all 

How can I use Google Cloud's ISO/IEC 27001 for my own organization's compliance efforts? 

Your organization will have to seek out and obtain its own certification, but you can leverage the Google Cloud certificate to understand how we have implemented the requirements for our products. After your organization understands which ISO/IEC 27001 controls are already covered under the Google Cloud services, you can work to complete your own implementation and certification.
